REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

In the present invention, the same dichloromethane and impurities removed from the extractive distillation unit is used to feed the fluorination reaction such that the need for additional steps to separate the extractive agent from the impurities is eliminated, [page 3, lines 10-13 of the specification].

The closest prior art to WO '660, while using the same extractive agent dichloromethane, does not disclose or suggest a side stream comprising a mixture of dichloromethane and at least one impurity and supplying at least a portion of said side stream mixture to a fluorination reaction which produces the mixture to be extractively distilled. WO '660 does not also disclose that the overhead stream of purified ditluoromethane have a concentration of said at least one impurity lower than that of said mixture, and said bottoms stream comprising dichloromethane and a concentration of said at least one impurity have a concentration less than that of said sidestream as further called for in claim 1. Moreover, WO ' 660 requires additional distillation step. See page 14, lines 7-11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
